 Enquiries and etransferes

## November 30, 2024 public ver-4

Notes: Gas checks no longer available. Can substitute powder coating in most cases.

The first "alloy" described is our "standard" antimolial alloy; but a soft alloy option is available where listed.

Not recommended for pistol platorms with polygonal rifling.

Due to modern (fast) twist ratess in rifles, we strongly reccommend keeping velocities below 2000 FPS. Trailboss, Tin Star, Unique will generally provide satisfactory results.

Any item listed below can be ordered "as cast"; ie not powder coated or lubed for a reduced price. Talk to the owner.

'0' buckshot (0.320") RB

'00' buck (0.330") RB H \$7 per pound (5 lb bags I/S)

[prairieprojectileinfo@gmail.com](mailto:prairieprojectileinfo@gmail.com)

**Round BALL sizes** ~ by the 100 count, Pb only. Hand cast.

.311" \$30	
.320" \$30	.490" \$45
	.495" \$50
.330" \$30	.530" \$50
.375" \$30	
.380" s/c \$45	.535" \$50
.440" \$40	
.451" \$40	.575" \$60
.454" \$40	.600" \$60
.457" \$45	.690" * \$65---apparently- order a Lee mould and you get an actual 0.690". BUT order a replacement mould from Lyman, and their 69 cal ball comes as a 0.620". Which does fit the standard 12 gauge wad collum better.
.465" \$50	
0.715" * \$70	

**When ordering, please include the full description ie diameter, grains, description, and quantity. We are now offering the 41 LC and 455 Webley bullets in powder coat. Others to follow.**

ABBREVIATIONS:

RN round nose  
 FN flat nose-suitable in lever action tube mag  
 BB bevel base- less case bellling is required on the straight walled case/ reduces bullet shaving on seating step.  
 FB flat base- traditionally considered more accurate as compared to the BB styles.  
 CHB conical hollow base only a couple applications here - 455 Mk II and the Minnie ball / black powder bullet.  
 CRAYOLA -see 'crayons'  
 SPIRE more aerodynamic than a round nose  
 SPITZER most aerodynamic bullet design  
 KEITH Elmer Keith, mid 20<sup>th</sup> century gun writer/prolific experimenter, designer; developed what became the 44 Remington Magnum and the 41 Remington Magnum cartridges. Also influenced the development of the 357 Magnum cartridge.  
 SWC semi-wadcutter cuts a fairly clean hole on paper target  
 WC wadcutter cuts a clean hole on paper target for easier scoring  
 1:20 soft alloy 1 part tin to 20 parts [pure] lead  
 1:30 soft alloy 1 part tin to 30 parts lead; ususally preferred in black powder cartridge competition  
 Pb pure lead no tin, no antimony  
 H 3% antimonial lead alloy  
 2-7 antimonial lead alloy- consisting of 2% tin / 7% antimony, quite hard, similar to "linotype alloy" which is obsolete, but reloading sources like Lyman still refer to it.  
 PC (lower case letters) is our code for our powder coating process. This is standard unless otherwise requested on modern cartridges. You may not have satisfactory results if used in polygonal rifling [Glock]. With modern twist rate rifles, we recommend staying below 2000 FPS.  
 {no g/c} where indicated, the bullet is designed for a gas check; however we no longer offer that option.  
 \*-- single cavity mould, labour intensive to cast  
 + special request

Payment options:

Cash is King, cheque with photo ID, or etransfere to the email below, it will auto deposit. Sorry, NO credit cards accepted. Banks are anti- \_\_\_\_ as a rule.

Prices subject to change based on world market factors /without notice or warning.
